

Offer

10% until 31st of December 2017

for all HEICO SPORTIV chassis technology parts!

Data and prices you will find on our homepage under the respective MODEL – CHASSIS TECHNOLOGY

CHASSIS TECHNOLOGY

With intuitive feeling, and harmoniously calibrated over thousands of test miles, sport springs and sport suspension from HEICO SPORTIV stand for precise handling, low side tilt and – thanks to the circa 30 mm lowering of the car and optional wheel spacers – attractive optics. In short: a win-win combination of superior driving dynamics and maximum suitability for everyday usage.

Selected Level® is a technology for lowering Volvo's adaptive air suspension. With Selected Level®, HEICO SPORTIV offers an all-in-one solution that is tailored specifically to the adaptive air suspension and allows the chassis to be lowered a further 30 millimeters* compared to the respective series setup. This provides for a sportier appearance, the lowered center of gravity additionally improving the vehicle's driving dynamics. Moreover, the reduce air resistance also helps improve fuel economy.
