

HEICO SPORTIV presents XC60 bodykit

Weiterstadt. With captivating design elements for the new Volvo XC60, HEICO SPORTIV presents the crowning glory of its celebrated individualization program. The new bodykit – consisting of a three-part front spoiler, distinctive rear skirt and four integrated exhaust tailpipes – blends harmoniously with the premium SUV's dynamic appearance.

“The challenges involved in developing complex exterior elements are becoming ever greater for independent tuning companies like HEICO SPORTIV,” explains HEICO SPORTIV managing director, Holger Hedtke. “Every step of the development process – from our initial freehand sketches to the final CAD-based construction – is carried out in-house, resulting in perfectly fitting, high quality components in our company's iconic HEICO design,” he continues.

The seven-part bodykit is manufactured in a complex PUR-R-RIM production process, and captivates with skillfully devised details. The front spoiler, for example, was conceived not only for the MOMENTUM and INSCRIPTION configurations, but also for the sporty R-DESIGN. A smart design feature makes this possible: separate air inlets designed for each variant provide for a wide range of applications, while simultaneously offering a further design highlight. The front spoiler naturally fulfills the latest pedestrian safety guidelines.

The rear is dominated by four oval tailpipes which are entirely enclosed by the rear skirt for the first time. This affords an especially classy appearance that can be attractively finished with an optional visible carbon inlay. The rear skirt can be combined with the series end muffler or, optionally, with the HEICO SPORTIV Selected Sound® exhaust system.

Prices for the HEICO SPORTIV bodykit for the Volvo XC60 start at 2,480.00 EUR. The bodykit for the D4, D5, T5, T6 and T8 models will be available from official Volvo distributors or directly from HEICO SPORTIV starting March 2018. All components are swapped with the original parts as a “Plug & Ride replacements” and come with a registration-free General Operating License (ABE).
