

HEICO SPORTIV starts delivery of new 21" inch sports wheel

Weiterstadt. With the new VOLUTION® V. 21" alloy wheel, HEICO SPORTIV is offering a reinterpretation of its successful five-spoke wheel, specifically designed for the latest Volvo models S90, V90, V90 CC, XC90 and the new XC60.

HEICO SPORTIV, the world's leading supplier of exclusive Volvo accessories, is enhancing this program and becomes the first finisher to offer a cast alloy wheel which, in time-honored fashion, unites a dynamic and timeless design positioned above Volvo's standard portfolio.

"As a specialist enrooted with the Volvo brand, we can swiftly implement products which the market demands but are not offered by the manufacturer," says General Manager Holger Hedtke. "We already succeeded with the 90s models, and will defend our reputation as the fastest supplier for the new Volvo XC60, as well," he continues.

The evolved version of the classic VOLUTION® V. five-spoke wheel has a sharply concaved spoke arrangement, giving the wheel an even more dynamic and wider appearance. The wheels are manufactured in a low-pressure casting process followed by a complex machining procedure to remove excess material from behind the wheel spokes. As a result of this measure, it is possible to achieved a 6% or 1 kg weight saving compared to the Volvo serial wheel "turbine". The perfectly calibrated wheel offset for each configuration also ensures a harmonious line-up with the fenders. A further visual highlight is the wheel refinement comprising a bolted stainless steel plaque with a lasered HEICO SPORTIV logo.

For its launch at the beginning of July 2017, the 9x21" VOLUTION® V. sport wheel will be available in the color combination "Diamond Cut, Black", with further colors to follow.
