

HEICO makes the new Volvo V60 more sporty

Weiterstadt. New Volvo V60 continues Volvo's success story. The tuning company, HEICO SPORTIV, is making the family hatchback ever more sporty with more engine power, a more dynamic suspension and a race-look exhaust.

The elegant VOLUTION® V. sports wheels immediately catch the eye. The 9x21" five-spoke wheel is an inch higher and an inch wider than the largest standard Volvo wheel and completely fills out the wheel arches. The HEICO wheel is produced by low-pressure casting, saving around one kilogramm in weight compared with the standard wheel and further benefiting the driving dynamics. Complete wheel sets are fitted with 255/30R21 tyres from the technology partners, Continental or Pirelli, and are available in the colour combination "Diamond-Cut, Black". A visible and exclusive distinguishing feature is a separate HEICO stainless steel emblem recessed into the rim flange. As an alternative to the five-spoked design there is the 8x19" and 9x20" seven-spoke VOLUTION® VII. wheel, also in "Diamond-Cut, Black".

Driving fun can be further boosted with sport springs from HEICO SPORTIV. These are characterised by a hardening spring characteristic with increasing spring compression and balanced ride comfort during normal driving. Apart from the improved handling, the lowering of the vehicle by approx. 30 mm adds to the sporting appearance. This is further highlighted by HEICO SPORTIV wheel spacers, particularly in combination with standard Volvo wheels. The aluminium discs widen the axle by either 20 or 30 millimetres and are available in silver or black anodised.

HEICO SPORTIV's core competence since 1995 has been the development of power upgrades for Volvo engines. Motor tuning offers a noticeable increase in output and torque, significantly improving acceleration and elasticity and optimising responsiveness, maximum speed and fuel consumption. New in the product range for the Volvo V60 are the e.motion® variants for the D4 and T6 engine. The details:

- HEICO SPORTIV e.motion® V60 D4
Power: + 22 kW (30 PS)
Torque: + 80 Nm
- HEICO SPORTIV e.motion® V60 T6
Power: + 22 kW (30 PS)
Torque: + 70 Nm

In addition to e.motion® T6, HEICO SPORTIV is working on a performance kit comprising the e.motion® controller and wiring harness, a performance intercooler and a sports air filter element. The performance kit provides an even more agile response of the efficient Drive-E engine and a further boost in power and torque. Further details will be available later.

A visual distinguishing feature is the HEICO SPORTIV quad tailpipe kit that is integrated into the standard rear skirt. The oval stainless steel tailpipes have a diameter of 120x74 mm, a high-gloss chrome finish and bear the HEICO SPORTIV logo.

Highlights in the interior are the new HEICO SPORTIV knobs for the air vents. The knobs are milled from solid aluminium, bear a laser-engraved HEICO logo and are pushed onto the original part and securely fixed.

All HEICO SPORTIV products comply with the statutory regulations, have expert appraisal under §19 StVZO (German Road Traffic Licensing Regulations) or General Operating Certificate (ABE), and Conformity Certificate (CH) and up to 60 months' warranty (max. 150,000 km from initial registration in scope and handling in line with the Volvo manufacturer's warranty).

HEICO SPORTIV is the world's leading independent supplier of exclusive Volvo accessories with headquarters in Weiterstadt, Germany. The products are marketed worldwide through contract partners, in Germany and Switzerland via the Volvo dealer network. All products have up to 60 months' warranty from initial registration (depending on the country), are TÜV-tested and supplied exclusively with expert appraisal under §19 StVZO (German Road Traffic Licensing Regulations), General Operating Certificate (ABE), an EU certificate or Conformity Certificate (CH).
